

ABSTRACT OF THE DISCLOSURE

The Poly Pipe Water Flow Control Choker Gate is going to allow row crop farmers to water their fields more efficiently. The Choker Gate allows them to back water uphill without the use of barrels, tape and rope. The Choker Gate can also give a variety of height that will allow water to flow through the pipe at a restricted and controlled level. This invention can also close off completely the water flow through the poly pipe. The Choker Gate is more easily taken off and moved through the field than barrels and rope. After researching poly pipe products we found there was nothing on the market that gives farmers this much flexibility with one piece of equipment.
